GEC COMPUTERS WIN QUEEN'S AWARD

GEC Computers Limited have been awarded The Queen's Award for Technological Achievement for "the development of computers to control multi-interactive processes, providing software security and protection without sacrifice of operating speeds".

The Award relates to the unique design of 'Nucleus' - the built-in hardware real-time executive which is an integral feature of all GEC4000 processors. The Award recognises the technical innovation and the success directly attributable to it's practical application. 'Nucleus' is often a principal consideration in the selection of GEC4000 computers by many important users both in the UK and overseas and has played a major part in the Company's current enormous expansion.

In announcing the Award to GEC Computers' staff, Managing Director Alan Fraser said, "This Award is the culmination of several years of hard work by everyone in the Company and is an honour of which we are all very proud."

-END-

For further information please contact Ben Garner on 01-953 2030 ext 3745.

From the Managing Director:

*I am delighted to be able to tell you of an important honour bestowed upon our Company. The notification I have received contains these words:*

**"I have the honour to inform you that Her Majesty the Queen has been graciously pleased to approve The Prime Minister's recommendation that the Queen's Award for Technological Achievement should be conferred this year upon GEC COMPUTERS LIMITED"**

THE QUEEN'S AWARD FOR  
TECHNOLOGICAL ACHIEVEMENT

*The letter further explains that:*

**"The Award goes to the Company for the development of computers to control multi-interactive processes, providing software security and protection without sacrifice of operating speeds".**

*There is no doubt that this honour represents the culmination of many years of hard work by every department and person within the Company and is something of which we may all be justly proud.*

WELL DONE

*Alan Fraser.*
